### Milne Water Tube Boiler

THE STANDARD OF MODERN BOILER  
DESIGN—ALL WROUGHT STEEL

The Milne Water Tube Boiler, constructed throughout of flange steel, embodies an economical and water purifier, an added member, which utilizes heat heretofore wasted, and in proportion as this heat is absorbed or utilized there is a direct saving in fuel; additionally, water impurities are collected in such a manner as to prevent their coating the heating surfaces, thus maintaining the boiler throughout in that condition which insures a maximum transmission of heat to the water.

The design represents the standard of simplicity, eliminating entirely a multiplicity of hand-hole plates, stay-sheets and other material of various forms. In reducing the design to this very simple form, the greatest economy of fuel is obtained, and the cost of maintenance is reduced fully 10 per cent, and at the same time every provision will be found for quick and thorough inspection of all internal and external parts, and likewise for the removal and replacing of any of the tubes when found necessary.

Descriptive catalogue and bulletins will be sent on request.
